

Welcome!

Engage Nepal with Science is an initiative that promotes the integration of science and research in Nepalese communities. The goal is to empower, inspire, and foster confidence in the fields of **Science, Technology, Engineering, and Mathematics(STEM)**.

This initiative is the brainchild of **Alba Abad**, a researcher at the *Wellcome Centre for Cell Biology*. It operates as a collaborative effort between the *Research Institute for Bioscience and Biotechnology (RIBB)* in Nepal and the Wellcome Centre for Cell Biology at the University of Edinburgh in the United Kingdom.

The journey of [Engage Nepal with Science](#) began in 2010 when Alba, after completing her PhD, took a career break and traveled to Nepal. The project took shape in 2018 when the team started planning and networking with teachers and researchers remotely.

In March 2019, the team had their first face-to-face meeting and kick-started their work. Since then, they have been working tirelessly to engage Nepalese communities with science.
